

Yasoob Rashid

Full-Stack & Product-Focused Developer — Software Engineering Student

Srinagar, J&K — +91-6005707121 — yasoob4825.be23@chitkara.edu.in — LinkedIn — <https://www.linkedin.com/in/yasoob-rashid-107347295/>

Professional Summary

Product-minded Software Engineering student with strong foundations in **JavaScript, React, backend APIs, and data structures**. Hands-on experience building **scalable, user-centric applications** and **SaaS platforms**, with a focus on clean code, performance, and reliability. Comfortable collaborating with product and design teams, taking ownership of features end-to-end, and working in fast-paced startup environments. Motivated to build **high-impact software** that solves real business problems, aligned with Procol's mission of modernizing procurement.

Education

Bachelor of Engineering in Software Engineering: Chitkara University, Patiala, India

Expected Graduation: June 2027

Current Semester: 6th

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Web Development, Software Engineering (SDLC), System Design

Technical Skills

Programming languages: JavaScript, Java, C#.

Web technologies: Node.js, Express.js, React.js, ASP.NET Core

Database Management: MySQL, PostgreSQL, MongoDB, Firestore

Tools & Platforms: Git, Mac, Linux, Windows

Projects

AI Thumbnail Maker - AI SaaS Platform (MERN Stack, Gemini API)

- Built a **production-style SaaS platform** that generates marketing thumbnails using AI.
- Implemented **AI-driven workflows** for image generation, validation, and response handling.
- Designed backend APIs with structured request handling and validation.
- Optimized application reliability through debugging, error handling, and testing.
- Demonstrated **end-to-end ownership**: idea, development, testing, iteration.

Crypto Price Tracking App

- **Technologies:** React.js, CoinGecko API.
- Developed a **real-time crypto price tracking web application** using React.js.
- Integrated the **CoinGecko public API** to fetch live prices, market caps, and price changes.
- Implemented efficient state management and component-based architecture.

- Demonstrates ability to build **data-driven, user-centric products**.

Logistic measuring system— (RaspBerry pi, Arduino nano 33IOT)

- Developed a software solution integrated logistic measurement system.
- Debugged hardware-software integration issues under real constraints.
- Strengthened analytical thinking and reliability-focused engineering.

Employability Skills & Leadership

Teamwork:	Collaborated effectively on group projects and coursework.
Problem solving:	Applied analytical thinking to tackle coding and algorithmic challenges.
Communication:	Strong written and verbal communication through presentations and documentations.
Engineering Discipline:	Clean code, testing mindset, structured development

Certifications

- **Full Stack Development with MERN** — Nasscom Foundation & Zikshaa (Completed)
- **Python 3 Programming Specialization** — University of Michigan, Coursera
- **Fundamentals of Java Programming** — Board Infinity, Coursera
- **Introduction to Operating Systems Specialization** — Codio, Coursera
